Customer Churn — Executive Analytics Capstone

Decision question: Which customer groups should a fictional subscription team contact first to reduce avoidable churn?

Executive snapshot

Metric	Observed value
Customers	15
Churned customers	7
Churn rate	46.7%
Retention rate	53.3%
Average tenure	18.8 months
Monthly charges associated with churn	■409.93 (exposure proxy)

Five decision-relevant insights

• Observed churn: 7 of 15 customers (46.7%); observed retention: 53.3%.

• Churned customers account for ■409.93 in summed monthly charges; this is an exposure proxy, not a forecast.

• Highest observed contract churn: Month-to-Month (100.0%; n=7).

• Highest observed tenure-band churn: 0-12 months (100.0%; n=6).

• Highest observed support-ticket-band churn: 4+ tickets (100.0%; n=5).

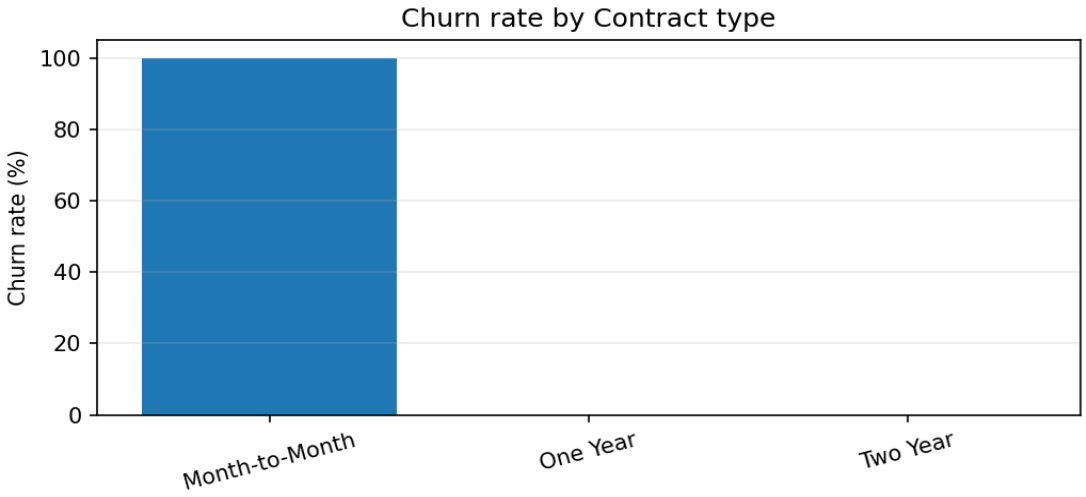

Recommendation

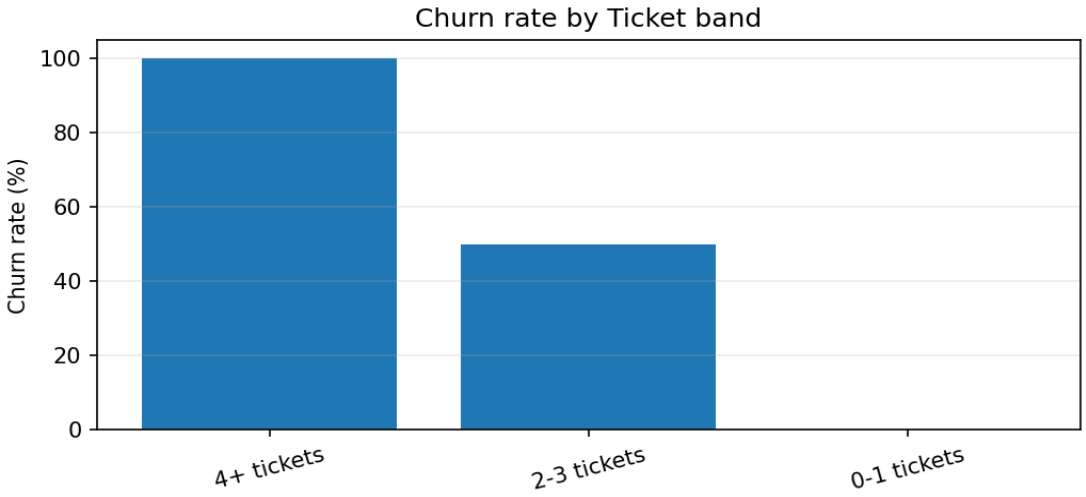

Run a measured service-outreach pilot for month-to-month customers with several recent support tickets, after verifying segment counts. Track contact rate, response rate, 30/60-day retention, cost per retained customer, and feedback. Use a holdout or matched group where possible.

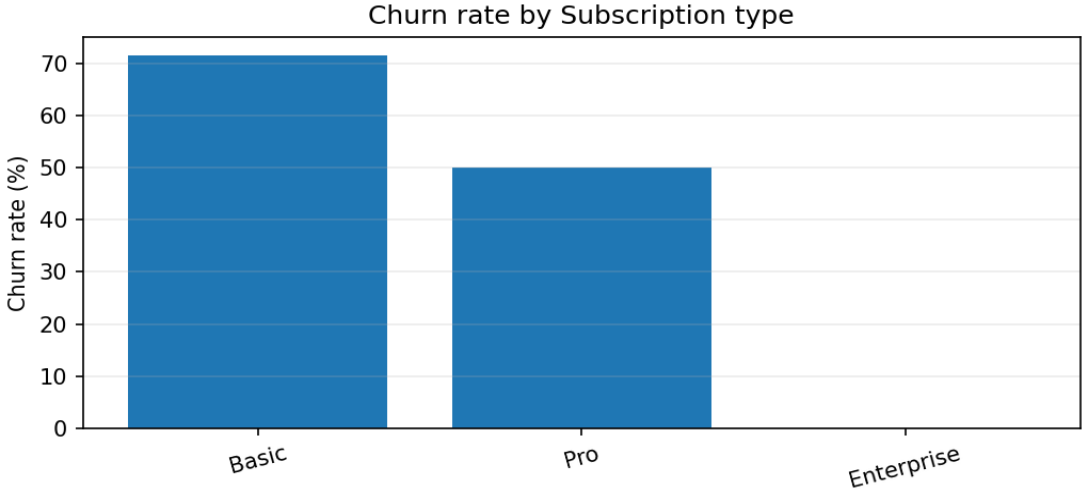

Limitations

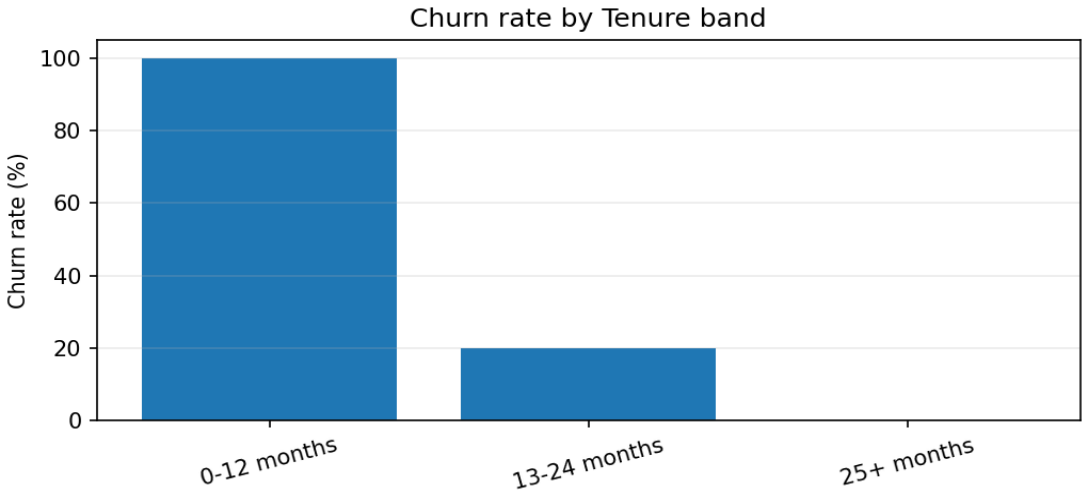

The sample has only 15 synthetic records. Segment percentages are unstable; no intervention outcomes or timeline are provided. Associations do not prove causation. This is descriptive analysis, not a validated predictive model.
